Education

Master of Computer Applications (MCA)

Year of Completion: 2027
Banasthali Vidyapith, Rajasthan

Bachelor of Computer Applications (BCA)

Year of Completion: 2025
Institute of Management Education, New Delhi

Experience

AI Developer Intern

Sep 2025 – Dec 2025
Mayfly Technologies, New Delhi

Developed and integrated AI-based product features across two live ios products: Nuri (AI Therapy chatbot), RewireBuddy (habit-tracking assistant and Porn Quitter App). Engineered backend modules using Python and REST APIs, ensuring reliable data flow between AI models and client-facing interfaces. Collaborated with the product team to translate business requirements into technical implementations, consistently delivering features within sprint deadlines. Maintained strict confidentiality in accordance with NDA agreements while working with sensitive user data. Gained practical exposure to agile workflows, code review processes, and production deployment pipelines in a fast-paced product-based startup environment.

Projects

AI-Powered Vedic Human – Yog at Ease

Jan 2026 – Apr 2026

Flask, Python, MySQL, REST APIs, JWT Auth

Live Demo

Built a full-stack wellness platform with a Flask backend serving concurrent API requests at sub-200ms response times. Implemented JWT-based authentication with token refresh logic for secure session management. Designed and normalized a MySQL database with indexing strategies that reduced query time by over 40%. Integrated an AI-powered recommendation engine generating personalized yoga and diet plans based on user wellness data. Deployed on Vercel with environment-based configuration for seamless production releases.

Fuel Route Planner API

2026

Django, DRF, Python, REST APIs, MySQL, OpenStreetMap

Built a production-ready backend API for intelligent fuel-efficient route planning. Designed RESTful endpoints using Django REST Framework delivering route summaries, estimated fuel costs, and ranked nearest fuel station recommendations. Integrated OpenStreetMap geolocation APIs for accurate distance and route computation. Implemented fuel cost estimation logic using Python with structured CSV datasets mapping regional fuel prices, with robust error handling for edge cases.

Travel Management System

Jul 2024 – Sep 2024

Java, JDBC, MySQL

Developed a desktop travel booking application using Java Swing and JDBC with secure login, hashed credentials, and role-based access for admin and customer users. Designed a normalized MySQL schema covering travel routes, seat availability, bookings, and payment history. Built booking, cancellation, and itinerary modules with real-time availability checks and auto-generated confirmations.

Technical Skills

Languages Java, Python, C, .Net, HTML, CSS

Backend Flask, Django, Django REST Framework, REST APIs, JDBC, JWT Authentication

Databases MySQL

Tools GitHub, Postman, VS Code, Eclipse, NetBeans

Concepts Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design
